

AI-Driven Identity Security

AI-Driven Identity Security

Digital transformation to the cloud, work from anywhere initiatives, mergers and acquisitions, adoption of new enterprise apps — among other transformational changes — have introduced too many user entities and points of access.

Why AI Matters?

AI-Driven data intelligence automates the discovery, management, and control of all user access. This allows you to not only make better and faster access decisions, but also to quickly spot and respond to potential threats. It empowers every worker with correct and timely access when they need it, proactively engages business users to identify risky access, and helps security professionals intelligently create and maintain access models in today's dynamic IT environment.

Who Benefits?

SailPoint has the leading AI-driven identity security solution in the market that delivers unmatched intelligence and frictionless automation using machine learning and analytics.

AI-driven identity security proactively provides organizations 360-degree visibility – at speed and scale – into what access users have, what is necessary, and what access is at risk for potential security breaches. Seamless integration with your digital ecosystem extends your ability to embed identity context across your environment and centrally control access to all data, applications, systems, and cloud infrastructure for all identity types. The goal? Customers can quickly adapt to changing environments, boost worker and IT productivity and stay ahead of security and compliance issues across the enterprise.

Business Managers and Application Owners

Automatically accept recommendations for low-risk access

Focus on higher-risk access that requires more attention

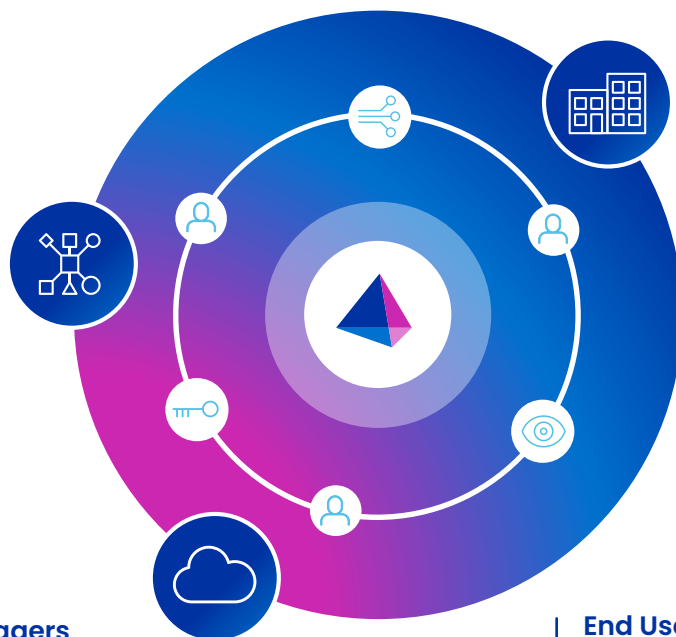

Avoid rubber stamping that leads to incorrect access approvals

Business Managers and Application Owners

Proactively spot and remediate potential risky access

Generate certification campaigns to address risky access

Understand the security factors behind access anomalies

Compliance Managers

Obtain comprehensive visibility to department and corporate-level compliance

Control access based on specific compliance policies

End Users

Empower users by recommending appropriate access

Keep user access up-to-date in today's dynamic digital environment

SailPoint Customers Succeed with Proven Results

Our customers can quickly take control of their enterprise identity security program and see tangible results in time savings, increased productivity, simplified compliance and actual ROI.

Energy Company Using AI Powered Recommendations

St. James Place leveraging automated certification campaigns to see:

From **1 year** to
1 month to
complete
certifications

640 obsolete
accounts were
discovered and
deleted

380 accounts
had unnecessary
access revoked

How Can You Benefit from AI-Driven Identity Security?

The SailPoint difference unleashes the power of AI as the core foundation of your security program with:

Unmatched Data Intelligence

Adapt and ensure the security of every identity with comprehensive visibility and deep insight

Smart Recommendations

Streamline and prioritize processes to better discover, manage, grant and certify user access

Simplified Role Management

Automate the creation and maintenance of roles that adapt to the dynamic digital environment

Our identity security team of experts can guide you through all aspects of AI set-up, usage and value, starting with Day 1.

Professional Services and Support

Whether you need implementation assistance, ongoing configuration, or performance management, our goal is expediting your deployment and maximizing your identity investment.

Product Training and Certification

SailPoint's Identity University provides training and certification designed to increase productivity across your teams and ensure the most successful implementation.

Our Industry Leadership

SailPoint maintains the highest leadership position across all major analyst reviews and is relied upon by the largest enterprises to govern millions of identities, billions of points of access, and tens of thousands of applications and data sources.

How to Get Started

SailPoint Identity Security Cloud provides two levels of SaaS capabilities tailored to help you achieve your business goals.

Business Plus

Comprehensive identity security suite built with AI and ML to discover, secure, and manage identities across an entire hybrid infrastructure.

Access Request and Approvals

Automated Provisioning

Access Certifications

Separation of Duties

About SailPoint

SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today's cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today's most pressing threats.
